

Appl. No. 10/015,241
Amtd. dated 09/28/2004
Reply to Office Action of 08/09/2004

IN THE CLAIMS:

Please amend Claims 7 and 10 as shown below and cancel Claims 8, 9, 13, 16, 19, 24, 27, 30 and 33.

1. (Previously amended) A method of storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the method comprising the steps of:

determining whether the data is to be stored into the two storage systems; and

forwarding the data, if the data is to be stored into the two storage systems, to two logical volume managers (LVMs) for storing the data, each one of the two LVMs managing one of the two storage systems.

2. (Original) The method of Claim 1 wherein the determining step is performed by one of the two LVMs.

3. Canceled.

4. (Previously amended) The method of Claim 20 wherein the data is forwarded to the LVM that is not performing the determining step.

5. (Previously amended) A method of storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the method comprising the steps of:

Page 2 of 17

Appl. No. 10/015,241
Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the two storage systems; and

forwarding the data to a second LVM for storage if so determined.

6. Canceled.

7. (Currently amended) A method of reading data by a computer system comprising the steps of:

determining whether the data is to be read from a storage system that is incompatibly formatted with storage systems that the computer system ordinarily uses;

requesting the data from the storage system, the requesting step being performed by a first logical volume manager (LVM) and sent to a second LVM;

converting the data into a format compatible with a format of data stored in the storage systems that the computer system ordinarily uses; and

forwarding the data to the computer system.

8. Canceled.

Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

9. Canceled.
10. (Currently amended) The method of Claim 9 7 wherein the converting step is performed by the first LVM.
11. (Previously amended) A computer program product on a computer readable medium for storing data into two storage systems, the two storage system being incompatibly formatted with each other, the computer program product comprising:

code means for determining whether the data is to be stored into the two storage systems; and

code means, if the data is to be stored in the two storage systems, for forwarding the data to two logical volume managers (LVMs) for storage, each one of the two LVMs managing one of the two storage systems.
12. (Previously amended) A computer program product on a computer readable medium for storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the computer program product comprising:

first code means for forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the two storage systems; and

AUS920010863US1

Page 4 of 17

Appl. No. 10/015,241
Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

second code means for forwarding the data to a second LVM for storage if so determined.

13. Canceled.

14. (Previously amended) An apparatus for storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the apparatus comprising:

means for determining whether the data is to be stored into the two storage systems; and

means, if the data is to be stored into the two storage systems, for forwarding the data to two logical volume managers (LVMs) for storage, each one of the two LVMs managing one of the two storage systems.

15. (Previously amended) An apparatus for storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the apparatus comprising:

first means for forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the two storage systems; and

AUS920010863US1

Page 5 of 17

Appl. No. 10/015,241
Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

second means for forwarding the data to a second LVM for storage if so determined.

16. Canceled.

17. (Previously amended) A computer system for storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the computer system comprising:

at least one storage device for storing code data; and

at least one processor for processing the code data to determine whether the data is to be stored into the two storage systems and to forward the data, if the data is to be stored into the two storage systems, to two logical volume managers (LVMs) for storing the data, each one of the two LVMs managing one of the two storage systems.

18. (Previously amended) A computer system for storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the computer system comprising:

at least one storage device for holding code data; and

at least one processor for processing the code data to forward the data to a first logical volume manager (LVM), the first LVM determining whether the data is

to be stored into the two storage systems and to forward the data to a second LVM for storage if so determined.

19. Canceled.

20. (Previously added) A method of storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the method comprising the steps of:

determining whether the data is to be stored into the two storage systems; and

forwarding the data, if the data is to be stored into the two storage systems, to two logical volume managers (LVMs) for storing the data, each one of the two LVMs managing one of the two storage systems and one of the two LVMs determining whether the data is to be stored into the two storage systems and forwarding the data to the other LVM if it is so determined.

21. (Previously added) A method of storing data into two storage systems, the two storage systems being incompatibly formatted with each other, the method comprising the steps of:

forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the two storage systems; and

AUS920010863US1

Appl. No. 10/015,241
Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

forwarding the data, using the first LVM, to a second LVM for storage if so determined.

22. (Previously added) A method of storing data into a first and a second storage systems, the first storage system for storing data that is compatible with data usable by a system and the second storage system for storing data that is incompatible with data usable by the system, the method comprising the steps of:

determining whether the data is to be stored into the first and the second storage systems, the data being formatted to be stored in the first storage system; and

storing the data, if the data is to be stored in the first and the second storage systems, in the first and the second storage systems by forwarding the data to a first logical volume manager (LVM) and a second LVM, the second LVM for converting the data into a format compatible with format of data stored in the second storage system.

23. (Previously added) A method of storing data into a first and a second storage systems, the first storage system for storing data that is compatible with data usable by a system and the second storage system for storing data that is incompatible with data usable by the system, the method comprising the steps of:

AUS920010863US1

Page 8 of 17

Appl. No. 10/015,241
Amdt. dated 09/28/2004
Reply to Office Action of 08/09/2004

forwarding the data to a first logical volume manager (LVM), the data being formatted to be stored in the first storage system, the first LVM determining whether the data is to be stored into the first and the second storage systems; and

forwarding, if it is determined that the data is to be stored into the first and the second storage systems, the data to a second LVM for storing the data into the second storage system, the second LVM for converting the data into a format compatible with format of data stored in the second storage system.

24. Canceled.

25. (Previously added) A computer program product on a computer readable medium for storing data into a first and a second storage systems, the first storage system for storing data that is compatible with data usable by a system and the second storage system for storing data that is incompatible with data usable by the system, the computer program product comprising:

code means for determining whether the data is to be stored into the first and the second storage systems, the data being in a format compatible with data stored in the first storage system; and

code means for storing the data, if the data is to be stored in the first and the second storage systems, in the first and the second storage systems by forwarding the data to a first logical volume manager (LVM) and a second LVM, the second LVM for converting the data into a format compatible to format of data stored in the second storage system.

26. (Previously added) A computer program product on a computer readable medium for storing data into a first and a second storage systems, the first storage system for storing data that is compatible with data usable by a system and the second storage system for storing data that is incompatible with data usable by the system, the computer program product comprising:

first code means for forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the the first and the second storage systems; and

second code means, if the data is to be stored in the first and the second storage systems, for forwarding the data to a second LVM, the second LVM for converting the data into a format compatible with format of data stored in the second storage system.

27. Canceled.

28. (Previously added) An apparatus for storing data into a first and a second storage systems, the first storage system for storing data having a format compatible with format of data usable by a system, the second storage system for storing data having a format that is incompatible with format of data usable by the system, the apparatus comprising:

means for determining whether the data is to be stored into the first and the second storage systems, the data having a format compatible with format of data usable by the system; and

means for storing the data, if the data is to be stored in the first and the second storage systems, in the first and the second storage systems by forwarding the data to a first logical volume manager (LVM) and a second LVM, the second LVM for converting the data into a format compatible with format of data stored in the second storage system.

29. (Previously added) An apparatus for storing data into a first and a second storage systems, the first storage system for storing data having a format compatible with format of data usable by a system, the second storage system for storing data having a format that is incompatible with format of data usable by the system, the apparatus comprising:

first means for forwarding the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the first and the second storage systems, the data being in a format compatible with format of data usable by the system;

second means, if the data is to be stored in the first and the second storage systems, for forwarding the data to a second LVM, the second LVM for converting the data into a format compatible with format of data stored in the second storage system; and

means for storing the data in the first and the second storage systems.

30. Canceled.

31. (Previously added) A computer system for storing data into a first and a second storage systems, the first storage system for storing data having a format compatible with format of data usable by the computer system, the second storage system for storing data having a format that is incompatible with format of data usable by the computer system, the computer system comprising:

at least one storage device for storing code data; and

at least one processor for processing the code data to determine whether the data is to be stored into the

first and the second storage systems, the data being in a format that is compatible with format of data stored in the first storage system and to store the data, if the data is to be stored in the first and the second storage systems, in the first and the second storage systems by forwarding the data to a first logical volume manager (LVM) and a second LVM, the second LVM for converting the data into a format compatible with format of data stored in the second storage system.

32. (Previously added) A computer system for storing data into a first and a second storage systems, the first storage system for storing data having a format compatible with format of data that is usable by the computer system, the second storage system for storing data having a format that is incompatible with format of data that is usable by the computer system, the computer system comprising:

at least one storage device for storing code data; and

at least one processor for processing the code data to forward the data to a first logical volume manager (LVM), the first LVM determining whether the data is to be stored into the first and the second storage systems, the data being in a format compatible with format of data usable by the computer system and to forward the data, if the data is to be stored into the first and the second storage systems, to a second LVM,
